

WHAT ARE PFAS?

Per- and polyfluoroalkyl substances (PFAS) are human-made chemicals known to cause adverse human health and environmental effects.

110M

PFAS are estimated to be in the drinking water of over 110 million people.

PFAS are present in everyday products from food packing to non-stick cookware to bibs.

QUALITY OF LIFE

PFAS can accumulate in the body and in ecosystems where they can remain for long periods of time.

HEALTH IMPACT

PFAS are linked to immune system suppression, endocrine disruption, reproductive problems, birth defects, cancer, and developmental problems in children.

ENVIRONMENTAL RISKS

PFAS are found in all parts of the environment from soil, water, and air to fish and wildlife.

FUTURE ACTION

To change the future, we need your voice.
We need your story.
